DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 11 is rejected under 35 U.S.C. 102(b) as being anticipated by Liebermann (3840808).

Regarding claim 11, Liebermann discloses [see Fig. 1] an electronic test instrument (electrical meter 10) comprising a housing (main body 11) having a first (12) and second (13) jaws at one end of the housing (11) forming a clamp [see Fig. 1], at least one of the jaws (13) being movable [via actuator mechanism 14] into and out of engagement with the other jaw (12), a blade (probe 19) protruding from one of said jaws (12) and having a sensor embedded therein, an electrical circuit [not shown but see column 2 lines 15-16] in the housing (11) in electrical connection with the sensor [see column 2, lines 30-33], the circuit being operable to indicate the presence of a voltage near the blade (19) [see column 2, lines 15-16 and 30-33].

Conclusion

3. Applicant's arguments with respect to claims 1-6 and 11-14 have been considered but are moot in view of the new ground(s) of rejection.
4. Claims 12-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2829

5. Claims 1-10 are allowed over the prior art.
6. The following is a statement of reasons for the indication of allowable subject matter: regarding claims 1 and 12, the examiner was unable to locate in combination with other limitations an electronic test instrument comprising a motor having an eccentrically-mounted weight for creating vibration when the motor is activated in response to the DC control level voltage so as to run at a rate proportional to the AC voltage input signal. Since claims 2-6 depends off of claim 1 and claim 13 depends off of claim 12, they are also allowed.

Regarding claims 7 and 14, the examiner was unable to locate in combination with other limitations an electronic test instrument comprising a second converter circuit for converting the AC non-fundamental signal to a distortion signal which is proportional to the total distortion and noise in the AC voltage input signal and a comparator circuit for comparing the distortion signal to the DC equivalent reference voltage. Since claims 8-10 depends off of claim 7, they are also allowed.

The art of record does not disclose the above limitations, nor would it be obvious to modify the art of record so as to include the above limitations.
